## Investment Case - Updated: November 6, 2022

Apple is the world's largest vendor of technology goods and services. For the past decade or so, Apple has cemented itself as the premium provider of mobile phones, tablets, and computers. More recently, Apple has expanded into adjacent markets such as wearables, software, and services. From 2015 through 2020, its traditional hardware businesses declined in volumes (partially offset by higher selling prices). However, the advent of 5G wireless service has prompted consumers to upgrade their phones, driving Apple's best handset growth in years. Meanwhile, Apple has a long-term opportunity to expand its adjacent businesses beyond its traditional hardware businesses. While not cheap by historical standards (as of this writing), Apple shares offer compelling returns as it harvests the upgrade cycle and broadens its reach. The company is rumored to be developing products for the automotive and virtual reality markets.
